Art Unit: 2137

1	DETAILED ACTION
2	
3	This action is in response to the communication filed on 9/1/2005.
4	
5	All objections and rejections not set forth below have been withdrawn.
6	
7	
8	Claim Rejections - 35 USC § 103
9	
10	The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all
11	obviousness rejections set forth in this Office action:
12 13 14 15 16	(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
18	Claims 1 – 3, 5 – 11, and 13 – 15 are rejected under 35 U.S.C. 103(a) as
19	being unpatentable over Pancha et al., "System and Method for Coupling Remote
20	Data Stores and Mobile Devices via an Internet Based Server", U.S. Patent
21	6,823,373 B1 in view of See et al., "Deterministic User Authentication Service for
22	Communication Network", U.S. Patent 6,070,243.
23	
24	Regarding claim 8, Pancha et al. discloses a system designed to allow users with
25	terminal devices to access a resource system. A disclosed system server
26	("authentication server") controls user access to the system by requiring user

Art Unit: 2137

1 authentication comprising an user id and password (Pancha et al., fig. 1, elem. 12; col.

Page 3

2 6, lines 43-50). While Pancha et al. discloses a general overview of the authentication

server for granting/denying terminal access to a resource system, details regarding the

submission and verification of the user id and password are not disclosed. Specifically,

5 Pancha et al., does not describe in detail how the authentication server handles

valid/invalid submissions and a database for storing the id and passwords of system

users.

3

15

16

17

18

19

20

21

See et al., discloses in detail authentication methods necessary for enabling an authentication server to grant/deny access to a resource system. See et al, discloses the comparison of received passwords and ids from terminal devices with documented passwords and ids located in a database. Also disclosed is a method for the delivery of password submission success/failure messages to a user with the option to re-attempt failed logins (See et al., col. 2, line 56 – col. 3, line 25; figs. 3A, 9).

It would have been obvious to one of ordinary skill in the art to combine the detailed authentication methods carried out by an authentication server of See et al., with the system for authenticating terminal devices to system resources of Pancha et al. This would have been obvious because one of ordinary skill in the art would have been motivated for the purposes of practical application to introduce into a system, describing an authentication server in general, specific methods that would allow the authentication server to authenticate terminal devices.

Thus the combination of Pancha et al. and See et al. discloses:

Application/Control Number: 10/026,596 Page 4

Art Unit: 2137

1 a database for establishing user's data for storing and retrieving the resource 2 system (See et al., fig. 3A, elem. 330); 3 a receiving module for receiving user's data for logging into the resource system inputted by the user at the terminal device (Pancha et al., fig. 1, elem. 12); 4 5 an identifying module for comparing the user's data transmitted from the 6 receiving module with the user's data stored in the database (See et al., fig. 5, elem. 7 530); 8 a replying module for responding according to compared results from the 9 identifying module, wherein if no user's data in the database matches the user's data 10 inputted by the user, the replying module sends a message of failure in logging into the 11 resource system to the user as the terminal device, and allows the user to re-input 12 user's data for logging into the resource system', if one of the user's data in the 13 database matches the user's data inputted by the user, the replying module generates a 14 message of permission for logging into the resource system (See et al., fig. 4, elem. 15 440); 16 a managing module having an authorization account for logging into the resource 17 system, wherein the managing module sends an authorization account to the resource 18 system according to the permission message transmitted from the replying module, so 19 as to allow the terminal device to interact with the resource system for data storage and 20 retrieval after the authorization account is identified by the resource systems (See et 21 al., fig. 4, elem. 460);

Art Unit: 2137

1	and a processing module for processing data generated by the interaction
2	between the terminal device and the resource system, so as to display the data in the
3	form of a web page on a browser of the terminal device (Pancha et al., fig. 1, elem. 10).
4	
5	Regarding claim 9, the combination of Pancha et al. and See et al. disclose:
6	the authorization system of claim 8, wherein the web page is in the form of
7	extensible markup language (XML) (Pancha et al., fig. 1, elems. 10, 18).
8	
9	Regarding claim 10, the combination of Pancha et al. and See et al. disclose:
10	the authorization system of claim 8, wherein the user's data include a dedicated
11	users name and a password corresponding to the user's name (Pancha et al., col. 6,
12	lines 43-50).
13	
14	Regarding claim 11, the combination of Pancha et al. and See et al. disclose:
15	the authorization system of claim 8, wherein the resource system is an enterprise
16	resource planning (ERP) system (Pancha et al., col. 5, lines 1-11).
17	
18	Regarding claim 13, the combination of Pancha et al. and See et al. disclose:
19	the authorization system of claim 8, wherein the authorization system is
20	established in a server host (Pancha et al., fig. 1, elem. 12).
21	
22	Regarding claim 14, the combination of Pancha et al. and See et al. disclose:

Art Unit: 2137

1	the authorization system of claim 13, wherein the authorization system is
2	middleware (Pancha et al., fig. 1, elem. 12). As disclosed, the system server (12)
3	infrastructure sits between clients and network applications and manages interaction.
4	
5	Regarding claim 15, the combination of Pancha et al. and See et al. disclose:
6	the authorization system of claim 8, wherein the authorization system and the
7	resource system are contained in world wide web (Pancha et al., col. 4, lines 49-55).
8	
9	Regarding claims $1-3$, and $5-7$, they are the method claims employed by the
10	apparatus claims above and are rejected for the same reasons.
11	
12	
13	Response to Arguments
14	
15	Applicant's arguments filed 9/1/2005 have been fully considered but they are not
16	persuasive.
17	
18	Applicant argues primarily that:
19	
20	The proposed combination of Pancha in view of See does not teach or suggest
21	an authorization system or method for storing and retrieving data in which a terminal
22	device is permitted to store and retrieve data from a resource system after authorization

Art Unit: 2137

Page 7

1	is granted, i.e., a system and method that provides direct access to the resource
2	system.

Pancha does not teach or suggest a system or method that allows the user to store and retrieve the resource system, i.e., one that provides **direct access** to the resource system.

In response to applicant's argument that the references fail to show certain features of applicant's invention, it is noted that the features upon which applicant relies (i.e., a terminal device is permitted to store and retrieve data from a resource system after authorization is granted, i.e., a system and method that provides direct access to the resource system AND a system or method that allows the user to store and retrieve the resource system, i.e., one that provides direct access to the resource system) are not recited in the rejected claim(s). Although the claims are interpreted in light of the specification, limitations from the specification are not read into the claims. See *In re Van Geuns*, 988 F.2d 1181, 26 USPQ2d 1057 (Fed. Cir. 1993).

Therefore, the examiner finds the applicant's arguments to be unpersuasive.

18 Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

22 Kamiyama et al., U.S. 2004/0064730.

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jeffery Williams whose telephone number is (571) 272-7965. The examiner can normally be reached on 8:30-5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Emmanuel Moise can be reached on (571) 272-3865. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
